## E-Portfolio Guidelines

E-Portfolio assignment which represents 5% of your final grade is about writing a reflection on your learning in this course (TC2MA324: History of Mathematics). The purpose of this reflection is to help you to evaluate your learning rather than evaluating the course itself.

Your task is to write a general reflection essay on what you have learned in this class. The essay should be about one page long using the standard essay's format. The following guidelines might help you in your essay:

- To what extent does the course improve your knowledge, analytic skills, Problem-solving skills, and Independent thinking skills?
- What were the challenges you faced and the accomplishments you achieved in this course?
- Were there any particular topics, assignments, worksheets of great interest to you. If yes, you might reflect a little about it.
- Did the course help you to understand Mathematics in a better and deeper way?
- How the course prepares you to be a successful teacher?
- Were the course learning outcomes related to the BTC's program learning outcomes (BTC's Competencies)? Which one and why? Write in depth the support and evidence of how you have competed a specific competency.

Please refer to the attached rubric scheme for more ideas and guidelines.

**Deadline:** Monday June 1, 2015. Please submit one hard copy to me and one online through Moodle.
